

## *RUNNING AND INSTALLING THE HUMANS*

### *CONFUSED?*

Do not panic. Take a deep breath and relax. There, now count to ten with me. 1... 2... 3... 4... 5... 6... 7... 8... 9... 10... Feel Better? Good. Now we can begin.
If you are having problems with Humans, here is a quick guide to Installing and Playing Humans.

### RUNNING HUMANS FROM YOUR HARD DRIVE

Run the INSTALL program from your floppy drive and type Y to the question...
"INSTALL TO HARD DRIVE?".
If you have Installed Humans to your hard drive, it will be located in the directory called Humans.
Go into that Directory by typing CD HUMANS and type HUMANS to play.

Remember, you can reconfigure your game at any time by running the INSTALL program which is now located on your hard drive in the Humans directory.

### RUNNING HUMANS FROM YOUR FLOPPY DRIVE

Run the INSTALL program from your floppy drive and type N to the question...
"INSTALL TO HARD DRIVE?".
Once you have run the INSTALL program, put disk 1 into your drive and type HUMANS to play.

Remember, you can reconfigure your game at any time by running the INSTALL program from disk 1.

### THE INSTALL PROGRAM

1.) The first thing to do is to run INSTALL on disk 1. You should do this even if you are going to be playing off the floppy.

2.) The INSTALL program has several self-explanatory prompts that ask you if you wish to use a joy-stick and what sort of sound board you are using.

3.) The INSTALL program also has one unusual section where it asks you to select which type of VGA card is being used. This is easily done.

In front of you is a scrolling Sign Post. The Sign Post may look odd or be scrolling jerkily.
Either way, press the SPACE bar. See the difference?
OK, now press the SPACE bar until the screen scrolls smoothly; then press ENTER!

## *TROUBLESHOOTING*

***Some common problems:***

**"Help! Although I have 640K I still cannot run this game."**
-No problem, this is a common difficulty with most games nowadays. They are so big they want EVERYTHING. The simplest solution is to make a boot disk. The easiest way to do this is to go into the INSTALL program and select the MAKE BOOT DISK option. Then follow the on screen prompts. If you do not wish to use this rather neat option, you can make a boot disk normally by following the instructions in your DOS manual.

**"Help! This scrolling VGA screen thing confuses me."**
-OK, it is really easy and even if you get it wrong the first time, just go back in and try again. You cannot hurt your machine by doing this, so try it as often as you like. We have used this system to make sure everyone can enjoy the excellent graphics of Humans.

**"Help! I have Windows and Humans does not work."**
-Sorry, you should NOT try to run Humans from Windows. Windows takes up memory that Humans cannot spare. Drop to DOS and run Humans as Normal.

**"Help! I got the sound board wrong and now I get no sound and my system locks up."**
-Easy now. This is no problem, just reconfigure your system using the INSTALL program.

**"HELP! Do I have to reinstall the entire game every time I run the INSTALL program?"**
-No, if you are reconfiguring the game from the hard drive, then just answer N to the question "INSTALL TO HARD DRIVE?" The program will then just change the magical Humans configuration file.

**"Help! Space aliens have landed in my field out back and are scaring my cattle by writing their initials in my crops!"**
-No problem, run the INSTALL program and select the EXTRA-TERRESTRIAL, BOVINE & ARABLE PRODUCE DUPLEX Toggle Option. This should restore reality in a matter of Nanoseconds. If it does not, you are clearly insane beyond help.
