Installation and Setup

Make sure that your computer meets the system requirements for this game. Delta-V requires the following:

Computer:	IBM or fully compatible, 80386 33MHz*; 80486 66+ MHz highly recommended
Controller:	Keyboard, [Microsoft compatible] mouse or Joystick preferred
Memory:	614,400 bytes (600K) free conventional memory and 2 MB EMS (2.5 MB EMS w/digital audio) system memory
Hard Drive:	17 MB free disk space
Floppy Drive:	1.44 MB 3.5" for installation only
Graphics:	VGA

•With slower processors, from Setup Screen, minimize detail to achieve optimum results.

Insert Disk 1 into your computer's floppy drive (A: or B:) then type the letter corresponding to the appropriate drive. Once the screen prompt shows that you are logged onto the appropriate drive, type **INSTALL**. Press the **ENTER** key on your keyboard. Follow the screen prompts to install the game.

Le Vieux Manuel

Example: If you have a 3.5" floppy drive called the B: drive, do the following (keyboard commands will be in bold typeface):

1. Insert Delta-V disk #1 into the B: drive.
2. Type **B:** [ENTER]
3. Type **INSTALL** [ENTER]
4. Follow the screen prompts to install Delta-V onto your hard disk.

We recommend using SMARTDRIVE to speed up disk access during gameplay. For more information consult your DOS manual or the Hints and Tips section of the Delta-V manual.

Delta-V will not run off of floppy disks and is meant to run on IBM or 100% compatible machines with DOS version 5.0 or greater. Disk Doubler or other disk compression routines for hard disks may cause problems in running Delta-V.

Configuring Delta-V to your system

To configure the Sound FX and Music drivers once Delta-V has successfully installed choose the 'Configure Game' option.

Select Sound Card

Select Music Card

Change Sound Default

Change Music Default

Done

Select your sound and music card using the first two options. Consult your sound card manual for precise instructions on specific type and settings for your particular card. Incorrect settings may cause problems with your system. Delta-V is shipped with the following default settings:

Sound/Music card selected:	**No Sound**
Base I/O address:	**220 Hex**
Base IRQ setting:	**7**
Base DMA setting:	**1**

Playing Delta-V

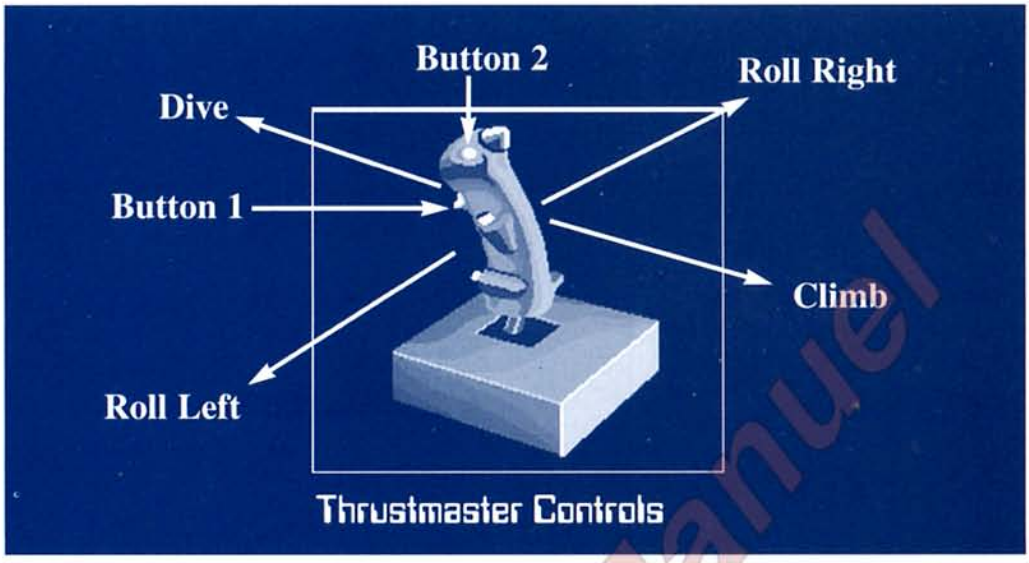

From the directory C:\DELTAV, type **DELTAV** to play the game.

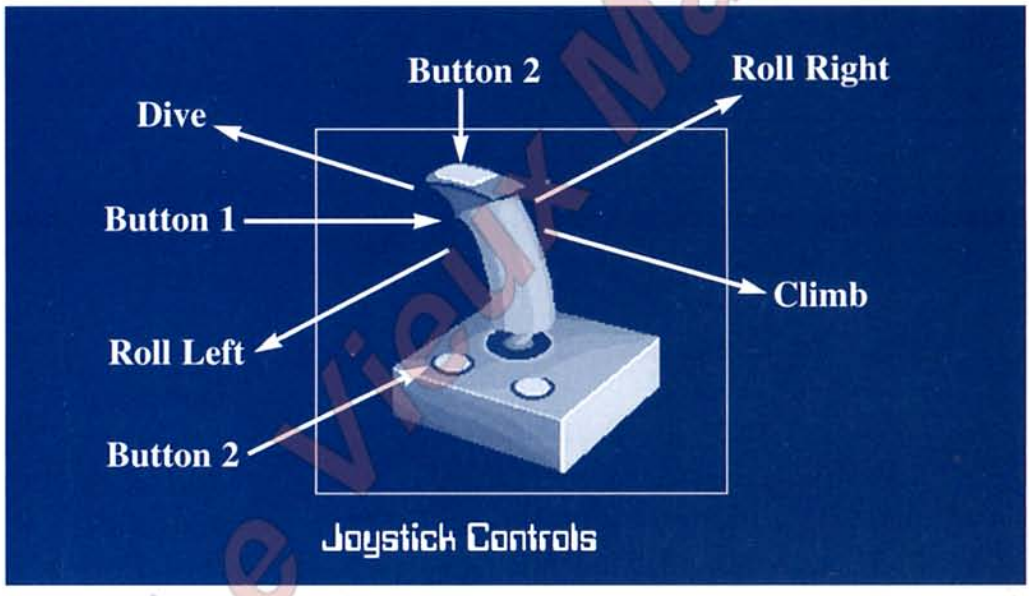

Select **New Game** if you want to begin a new Netrun.

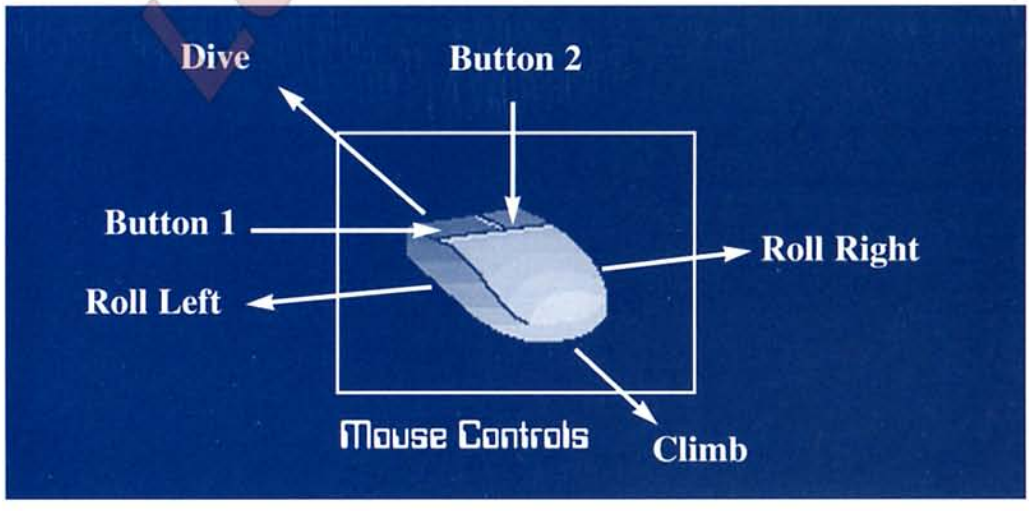

Select **Load Game** if you want to load a previously saved Netrun.

Select **Quit** to return to DOS.
